**Rocky Mountain Conservancy is Accepting
Applications for the 2025 Scholar-in-Residence Program**

Rocky Mountain Conservancy is accepting applications for the 2025 Scholar-in-Residence Program. This program follows the tradition of connecting scholarly and scientific experts in their field to our national parks. The selected Scholar-in-Residence will work with staff in Rocky Mountain Conservancy's Field Institute and the National Park Service Continental Divide Research Learning Center at Rocky Mountain National Park.

This program allows the selected candidate to live in Estes Park, Colorado and conduct research in their field of study. Scholars may include postdoctoral or postgrad students, professors, researchers, and writers/authors. Topics can vary. Any proposal that outlines a project that is intrinsically connected to Rocky Mountain National Park and fulfills the fellowship requirements will be welcome.

For a list of fellowship requirements and application details, visit <https://rmconservancy.org/work-with-us/employment/>

Applications will be accepted through March 31, 2025.
